Quickpay modular

Author: @Genuineq_office@genuineq.com

Version 1.0 20/08/2020

Payment module for osCommerce

Accept payments using Quickpay payment service provider : <https://quickpay.net/>

- A payment module for osCommerce that passes the customer directly from osCommerce checkout to a Quickpay payment window.
- Successful payments are passed back to the osCommerce checkout on completion
- Quickpay callbacks are also handled so that a successful payment is always recorded in osCommerce even if the customer's connection drops
- A payment link is recorded in osCommerce admin that can be sent to the customer to complete the payment at a later time
- Capture can be automated or performed manually from admin (eg. when stock availability has been confirmed)
- Partial and complete refunds may be performed from within admin
- Installs with limited simple changes (to only 2 files)

Acknowledgements

- Much of the code bundled here is from
 - o <https://github.com/loevendahl/quickpay10-oscommerce>
- It has been repackaged to avoid the need to amend code for installation and some bugfixing has been done.

Compatibility

Quickpay API version 10

Compatibility has been tested with osCommerce Phoenix releases of the Community Responsive Build of osC.

Installation

- Step 0: always make sure you have an up-to-date backup of your store database and code before installing an addon.
- Step 1: if necessary, prepare your store by creating the admin orders "hook":
 - For stores needing modification:
 - Look in the folder docs/v1077. There are some additional files and these changed files:
 - admin/includes/classes/order.php
 - admin/orders.php
 - If you have not changed any of these files for another addon you can copy all the supplied files to your store folder
 - If you have changed them, use a diff (differences) tool to merge them. If doing this manually.

osCommerce services: shop rescue, addons to order, customization, migration from older versions, github help, integration with stock & accounting systems, eBay etc – contact office@genuineq.com

- Step 2: copy the payment module and hook files to your store
- Step 3: install and enable the modules
 - Box module on shop with accepted cards: in administration / modules / boxes, install enable and position the box
 - Payment module: in administration / modules / payment install the quickpay module and copy the settings from your quickpay account.

Help & support

Free help and support with installing and using the addon is available via the support thread on osCommerce forums: <https://forums.oscommerce.com/topic/412146-quickpay-payment-modulefor-23/>

If you would like it installing for you, or customizing, or adapting for an earlier version of osCommerce, contact us via office@genuineq.com
